APIDIS Newsletter

Fall 2010

APIDIS feedback from ICT 2010

APIDIS participated in ICT 2010 in Brussels. APIDIS was demo'd at the Walloon region booth in September 2010 and feedback on the automatic production and summary prototypes was collected.

APIDIS interest at IBC 2010

APIDIS was of high interest at IBC's New Technology Campus (NTC) booth. APIDIS attracted the commercial interest of about 70 professionals on 9-14 September 2010. An [APIDIS presentation](#) was also made at a technical session.

APIDIS final trials

Since the beginning of Fall 2010, the end of project trials have been (or are being run) on the final **APIDIS** prototypes. We've tested 3 scenarios:

1. Video surveillance
2. Sharing and remixing context
3. Automatic generation of content for Internet portals

A report on the trial results will be available on www.apidis.org soon.

Beyond APIDIS

APIDIS completes in December 2010. In the project's last months, we are pleased to report that an integrated and real-time prototype has been deployed in a major basketball arena in Belgium to produce content automatically.

APIDIS has successfully met its objectives:

- The extraction of meaningful content from the video sequences captured by a set of complementary cameras.
- The automated production of video content.
- The personalized summarization of the content.

The final project results and publications will be available on www.apidis.org.
